The Honorable Suzanne Bonamici  
U.S. House of Representatives  
439 Cannon House Office Building  
Washington, DC 20515

Dear Oregon Congressional Delegation,

I am writing to express my strong support for the Jordan Cove Energy Project (JCEP). This project will create jobs, generate tax revenue, improve regional infrastructure and provide significant opportunities for local companies. I hope you will do everything in your power to support JCEP.

Knutson Towboat Company is a 97 year old natural resource transportation, marine and construction contracting services company offering tugboat and barge services, marine and heavy, general machine shop, dock facilities welding and fabrication, general maintenance and field repair. As such, our company has a large stake not only in the fate of JCEP, but also more generally in the future of Southwest Oregon.

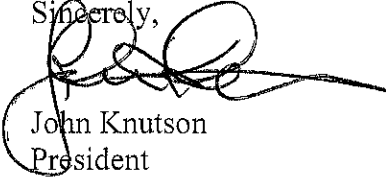

Construction on this multi-billion project is scheduled to begin in the third quarter of 2014 (this is of course dependent on the Department of Energy granting the company a license to export LNG to non-Free Trade Agreement Countries). The fact that this project is so massive means that not only will thousands of construction workers be employed by Jordan Cove; the company will also require the services of countless numbers of suppliers and other service providers from Coos County and around the State.

In fact, for our company, this project will likely mean a significant amount of work for the duration of the three and a half years of construction. Jordan Cove is working with the Port, and other state and local officials to identify ways to avoid overloading the limited capacity highway systems that service Coos Bay. While the details of the construction plan are still in development, we already know that the majority of materials will arrive at the construction site by barge.

The level of economic activity that will be derived from the LNG terminal development will also draw other business enterprise into Southwest Oregon. New maritime infrastructure will help the Port attract new business and excess power from the new South Dunes power plant (to be constructed and operated by Jordan Cove) will give our area residual electric power reserves that we don't currently have available for industries that have looked at Coos Bay for relocation, but took a pass because we don't currently have adequate power available. Every new industrial business that locates in Southwest Oregon represents a new potential partner for our company.

At Knutson Towboat Company, we pride ourselves as being a CAN DO" company. The Jordan Cove Energy Project will give us a lot more to do.

Sincerely,

A handwritten signature in black ink, appearing to read 'John Knutson', with a long horizontal flourish extending to the right.
